ABSTRACT:

PURPOSE: To prepare the titled mixed tea convenient for putting in a tea bag, and giving tea drink having excellent color, by using "benibana" as a color-developing material together with "juyaku", "hanru", "gaiyo", etc., and slitting and roasting the mixture.

CONSTITUTION: "Benibana" (flowers of carthamus tinctorius), "juyaku" (whole grass of Hottuynia cordata), "hanru" (leaf of stellaria media), "gaiyo" (leaf of artemisia princeps), "yokuinin" (seed of coix laryma-jobi), "ketsumeishi" (seed of cassia tora), and "chinpi" (fruit of citrus unshu) are dried in the shade to the water-content of ≤10%, and chopped to 2∼5mm in length. First, the "yokuinin" and the "ketsumeishi" are mixed together in a tea drier and roasted. Then, "benibana", "juyaku", "hanru", "gaiyo" and "chinpi" are put into the tea drier all together, and roasted to the water-content of ≤5% to obtain the objective mixed tea. The tea thus obtained has various drug activities originated from the herb medicines used as the raw materials. Furthermore, the use of the "benibana" as a color-developing material and chopping of the herb medicines enable the tea to be put in a tea bag and served as a drink similar to black tea.

ABSTRACTED-PUB-NO: JP 09108111A

BASIC-ABSTRACT:

Double layered tea bag comprises an outer tea bag enclosing crude drug tea and an inner bag containing compressed crude drug tea having larger sizes than those in the outer bag, particularly comprising 32 crude roasted drugs.

ADVANTAGE - Two types of larger and smaller sizes of crude drugs provide long lasting taste and flavour.

In an example, repeated extraction with hot water gradually penetrated in the inner compressed crude drugs and gave long lasting good taste and flavour.
